Education

King Mongkut's Institute of Technology Ladkrabang

Bachelor of Science / Information Technology / Current GPA: 3.68

Professional Summary

Full Stack Developer with a strong foundation in developing web and mobile applications. I possess comprehensive experience in end-to-end development, from architecting databases using both SQL and NoSQL. building user interfaces with React, Next.js, and React Native. On the backend, I am proficient in developing efficient server-side logic using Express.js and Django. I have experienced with cloud infrastructure, where I have successfully deployed applications on AWS by building scalability web using Load Balancers to manage traffic effectively. Furthermore, I have experienced through Docker and automated CI/CD pipelines using Github Webhooks to trigger automated builds and deployments in GCP.

Technical Skills & Soft Skills

- **Programming languages:** HTML, CSS, JavaScript, Python
- **Frameworks & Libraries:** Django, Express.js, Tailwind CSS, Next.js, React, PHP
- **Database:** MySQL, PostgreSQL, MongoDB
- **Tools:** GitHub, Docker, Postman
- **Cloud Platforms:** Amazon AWS
- **Languages:** Thai(Native), English(Fair)
- **Softskills:** Teamwork & Collaboration, Problem-solving, Adaptability

Academic Projects

Thesis Project

July 2025 - Current

Developed a mobile waste classification app with a **React Native** frontend and an **Express.js** backend. Evaluated and integrated optimized **deep learning models** (such as MobileNetV3 and GhostNetV2), utilizing fine-tuning and data augmentation to ensure high-precision automated sorting. The project is functions as an educational guide to cultivate proper disposal habits and eliminate sorting errors. This ensures high-purity recycling streams, optimizes waste management workflows, and significantly reduces the need for manual post-sorting.

Aerocast

Dec 2024 - Dec 2024

Developed a comprehensive weather forecast website using **Next.js** and **MongoDB**, integrating the OpenWeather API to provide data including temperature, PM2.5 levels, and daily forecasts. The website incorporates an interactive global map using Open Street Map to visualize environmental metrics worldwide, while allowing users to search for cities and save favorite locations for personalized tracking. This project delivers weather and PM2.5 data into actionable health and safety recommendations. It optimizes daily planning and enhances public awareness of environmental conditions.

OFFlearn

Sep 2024 - Oct 2024

Developed a learning management system (LMS) using **Django**, with a user interface built with **HTML**, **CSS (Tailwind CSS)**, and **JavaScript**. The system enabled instructors to create and manage courses, including adding learning topics, uploading files, and creating quizzes with various question types (multiple-choice, essay). Students could search for courses, enroll, access learning materials, and take quizzes.
